

Prompt

Create a professional, modern, and attractive college-level presentation on “Students Performance Analysis System” using only the content provided in my presentation.

Keep the same topics and order: Introduction, Background, Problem Statement, Objectives, Methodology, Discussion, Key Findings, and Conclusion.

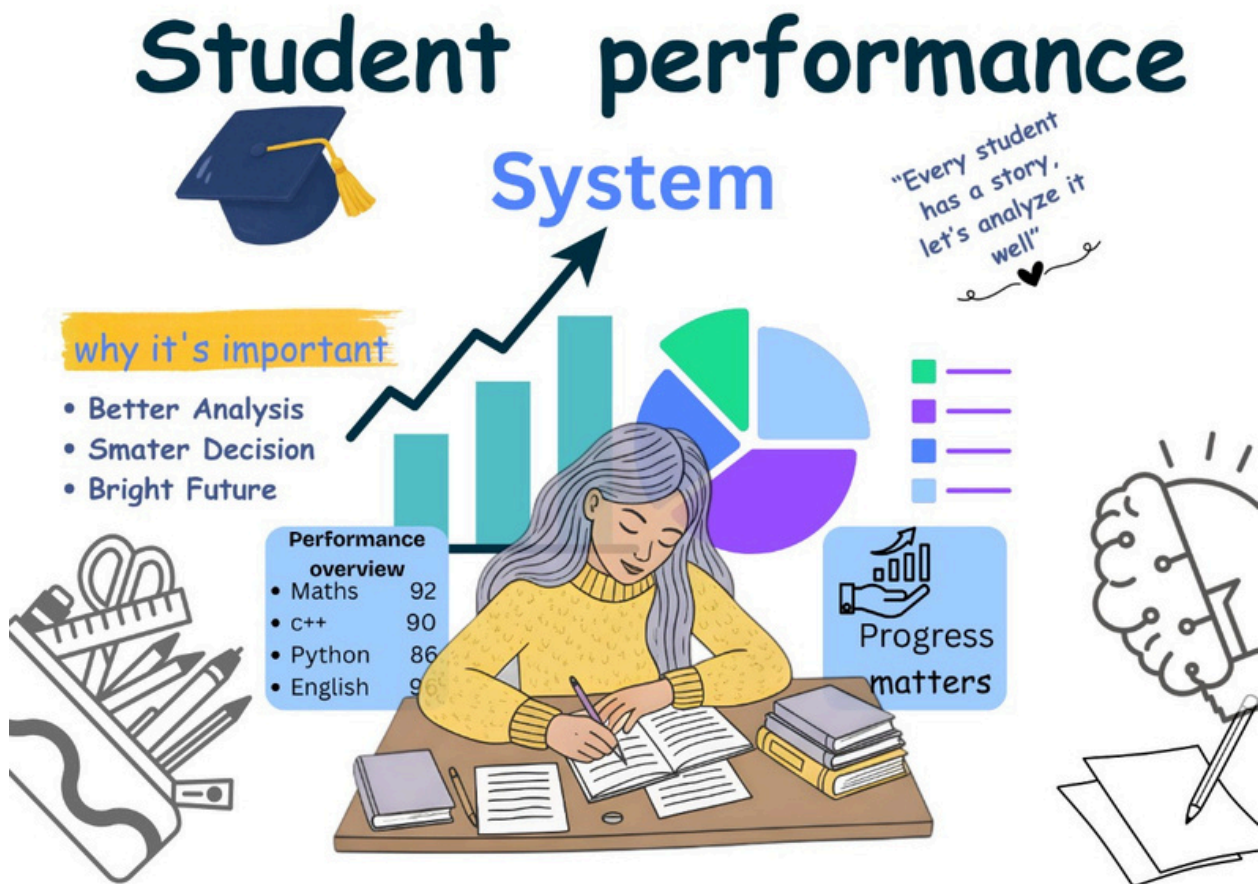

Use a clean blue, white, and dark navy technology-themed design with relevant student, education, data analysis, attendance, marks, and chart visuals.

Keep the slides simple, clear, and easy to present. Use short bullet points, clean layouts, professional fonts, minimal animations, and suitable icons/infographics.

Make it look like a CSE/AIML college project presentation—professional, neat, modern, and not overly colorful.

Do not add unrelated information or change the meaning of the original content.

Result

Key Features

- **Student Profile**
view personal details and academic history
- **Performance Analysis**
Track marks, attendance and overall progress

How it works

1. **Collect Data**
Marks, attendance, assignments, etc.
2. **Generate Insights**
Find strengths, weakness & patterns

Technologies

 **Python**

 **HTML**

 **JAVA**

• Our Goal

To create a smarter, data-driven education system that helps every student reach their full potential
